Professional Summary

Full Stack Engineer with experience building scalable applications using JavaScript, React, and REST APIs. Skilled in developing responsive user interfaces, integrating backend services, and optimizing performance. Familiar with Node.js, MongoDB, and cloud platforms, and experienced working in Agile environments to deliver reliable and user-focused solutions.

Work History

Software Engineer (Frontend) 06/2024 to 09/2025

ZynkTech – United Kingdom (Remote)

- Regularly used AI tools to assist with research, debugging, and improving development workflows.
- Worked with incomplete and evolving requirements, identifying gaps and clarifying missing details before implementation.
- Created structured internal documentation to improve clarity and consistency across the team.
- Built reusable components and improved project structure to make development faster and more reliable.
- Collaborated with design and backend teams to ensure accuracy and completeness of features.

Software Trainer 09/2022 to 03/2023

Vidya Development & Training Center – Thrissur

- Trained 100+ students in HTML, CSS, JavaScript, and web development fundamentals.
- Guided students in building web applications and understanding frontend-backend interaction.
- Created structured training materials and evaluated student performance.

PROJECTS

FindQ – Missing Person Tracking System

ReactJS, React Native

- Developed a React-based web application and mobile app for managing missing person cases.
- Built responsive UI components and integrated backend APIs.
- Structured and managed application data for efficient tracking.

AI Diet Assistant Chatbot

JavaScript, Rasa

- Developed an AI-based chatbot with structured user interaction and backend integration.
- Built frontend interface and handled API communication.
